## **Life without I.T.**

**Nowadays**, I.T. is universal and indispensable. Firstly, we need to know how I.T. shapes our lives. The extensive use of I.T., such as mobile phones, computers, the internet and televisions greatly influences the progress of human beings.

First of all, I.T. makes our lives become more convenient. If there is no mobile phone now, our communication will become more difficult. We cannot contact each other easily. Computers are important too. In the cyber world, there are many different cultures and values which we can explore. We can learn the languages of different countries. Also, online entertainment can give us relaxation through You-tube, online games, MSN, Facebook and so on. Almost every family has got at least one television. The main functions of television are to give us information and entertainment. The news also helps us understand different events happening around the world. Through the understanding of different news, it increases our knowledge. These are the advantages of I.T.

But if our life was without I.T., life would be different. Communication would become inconvenient. The Octopus card is only for small transactions and it is all I need to take. I do not need coins to take a bus or the MTR. So I.T. is important to us as it can boost our economy. And that is why everyone now cannot live without it.

If there is no television and computer, we would suffer from a lack of social or basic knowledge. I.T. is a fundamental need in our lives. Why do we need I.T.? It is because it can make the countries more prosperous. Countries which do not have utilization of computers have poverty and economic underdevelopment. In summary, I.T. makes our country more advanced.

In conclusion, I.T. has become an indispensable part of our lives. For instance, I think the Octopus card is extremely important. It is simple, light and convenient to use. Although the card is only for small transactions, it is all I need to take. I do not need coins to take a bus or the MTR. I.T. is important to everyone too and it can boost our economy.
